JSTL, File Upload And Downloads

JAKARTA® EE

Jakarta EE Expression Language

The **Jakarta Expression Language** (EL; formerly Expression Language and Unified Expression Language) is a special purpose programming language mostly used in Jakarta EE web applications for embedding and evaluating expressions in web pages. The specification writers and expert groups of the Java EE web-tier technologies have worked on a unified expression language which was first included in the JSP 2.1 specification (**JSR-245**), and later specified by itself in **JSR-341**, part of Java EE 7.

Version 4.0 was released in on 2020-10-07. The API moved from the **javax.el** package to the **jakarta.el** package, as part of the transition from Java EE to Jakarta EE.

JSTL

The **Jakarta Standard Tag Library** (JSTL; *formerly JavaServer Pages Standard Tag Library*) is a component of the Java EE Web application development platform. It extends the JSP specification by adding a tag library of JSP tags for common tasks, such as XML data processing, conditional execution, database access, loops and internationalization.

JSTL has five kind of tags.

- **Core Libraries**
- **Formatting Tags**
- **Function Tags**
- **XML Tags**
- **SQL Tags**

Upload and Download Files

In some scenario we have the requirement to upload/download files from/to application.

```
@MultipartConfig(fileSizeThreshold = 1024 * 1024,
  maxFileSize = 1024 * 1024 * 5,
  maxRequestSize = 1024 * 1024 * 5 * 5)
public class UpploadDownloadFileServlet extends HttpServlet {
    // . . .
}
```

```
<servlet>
        <servlet-name>UpploadDownloadFileServlet</servlet-name>
        <servlet-class>fullPath.UpploadDownloadFileServlet</servlet-class>
        <multipart-config>
            <location>/home/jlkesh/apps/path/jakartaee/uploads</location>
        </multipart-config>
    </servlet>
    <servlet-mapping>
        <servlet-name>UpploadDownloadFileServlet</servlet-name>
        <url-pattern>/uploads/</url-pattern>
    </servlet-mapping>
```
